

Steven Boada, Ph.D

Basic Information	(615) 200-0119 stevenboada@gmail.com	github.com/boada linkedin.com/in/theboada
Professional Experience	Activision Publishing, Inc. Senior Data Scientist, Gameplay As part of the game science team, I work to make Call of Duty better through data. In this role, I: • Partner with senior design leadership and cross-functional teams to define key metrics, identify opportunities for game and business improvements, and drive data-informed decision making across the game. • Lead initiatives to understand how gameplay systems (maps, modes, weapons, in-game communication, etc.) influence top-line KPIs and suggest design improvements based on data insights. • Design and implement experiments (A/B tests), develop data models, and create visualizations to analyze player behavior, gameplay patterns, and drive improvements in game features and player engagement. • Drive data quality and ensure instrumentation across the game to capture accurate and actionable data; collaborate closely with engineering teams to ensure seamless data flow. • Manage and mentor junior data scientists, offering guidance in study design, statistical analysis, and effective data communication. Senior Machine Learning Engineer January, 2021 – 2024 • Designed, built, and maintained ML infrastructure and tools, including autoML, CI/CD (Jenkins, GitHub Actions), model tracking (MLflow), and orchestration (Airflow) to support data-driven decision-making. • Crafted and implemented policy for external data ingestion and retention to ensure accessibility and proper data stewardship across the organization. • Developed near-realtime applications (via Spark streaming) to identify and mitigate in-game cheating and malicious behaviors, achieving action times in the low 10s of seconds. • Spearheaded the transition of ML infrastructure from AWS to GCP/GCS, optimizing scalability and performance. • Created machine learning models focused on customer conversion, churn prediction, and behavioral segmentation using survival analysis, clustering, and tree-based techniques. • Managed the day to day of a small team of junior data scientists to design, develop, and deploy recommendation systems that were integrated into Modern Warfare 2 (2022) and Modern Warfare 3 (2023). Insight Data Science Fellow New York, New York January, 2020 – 2021 • Completed a data science bootcamp focused on transitioning academics into the tech industry, working on real-world data problems. • Built a random forest model in Python to prioritize NYC restaurant inspections, improving violation detection by 2.5% and identifying critical issues up to 7 days earlier through an AWS-deployed API. Dept. of Physics and Astronomy, Rutgers University New Brunswick, New Jersey Postdoctoral Research Associate September, 2016 – 2021 • Designed and built parallelized data processing pipelines to analyze TBs of astronomical imaging data, producing standardized catalogs and rigorous results that contributed to 2 peer-reviewed publications and several hundred hours of telescope time. • Collaborated with senior scientists and graduate students to ensure the quality of data products and oversee scientific analysis. • Contributed to open-source Python projects focused on astronomy, adding features and fixing bugs in tools like photometrypipeline, astLib, and easyGalaxy.	
Skills	Machine Learning: Linear Models, Decision Trees, SVM, Clustering, Deep Learning, Survival Analysis CI/CD: Jenkins, Airflow, Docker Software and Computing: Open Source Contributor, Python, DataBricks, MLflow, SQL, AWS/GCP, Spark, and other cloud computing applications Leadership: Experience organizing and leading workshops and collaboration meetings, Teaching and mentoring	

junior team members, Eagle Scout.

Education

Texas A&M University, College Station, Texas

- Ph.D, Physics (astronomy focus), 2016

The University of Tennessee, Knoxville, Tennessee

- M.S., Physics (astronomy focus), 2009
- B.S., Physics, 2007
