

Steven Boada, Ph.D

Basic Information	(615) 200-0119 stevenboada@gmail.com	github.com/boada linkedin.com/in/theboada
Professional Experience	Activision Publishing, Inc. <i>Lead Data Scientist, Gameplay</i> As part of the game science team, I lead data science strategy and cross-functional analytics initiatives to improve gameplay systems and player experience across Call of Duty. In this role, I: ● Define and lead high-impact analytics initiatives with design leadership, analyzing how gameplay systems (maps, modes, weapons, communication systems, etc.) influence player behavior and top-line KPIs, and translating insights into actionable design recommendations. ● Own experimentation strategy for gameplay features, guiding the design and evaluation of A/B tests, statistical models, and large-scale player behavior analyses. ● Champion gameplay measurement strategy and data quality, partnering with engineering to improve telemetry coverage, instrumentation, and analytical reliability. ● Elevate team analytical capability by mentoring data scientists, reviewing experimental designs and analyses, and promoting best practices in experimentation, statistics, and data storytelling. <i>Senior Data Scientist, Gameplay</i> ● Restarted advanced, gameplay analytics support for partner studios and on-going Call of Duty titles. ● Highlighted Project: Led the study design and analysis of input advantage which resulted in a rework of the controller aim assist system in Black Ops 7 (2025). <i>Senior Machine Learning Engineer</i> ● Designed, built, and maintained ML infrastructure and tools, including autoML, CI/CD (Jenkins, GitHub Actions), model tracking (MLflow), and orchestration (Airflow) to support data-driven decision-making. ● Crafted and implemented policy for external data ingestion and retention to ensure accessibility and proper data stewardship across the organization. ● Developed near-realtime applications (via Spark streaming) to identify and mitigate in-game cheating and malicious behaviors, achieving action times in the low 10s of seconds. ● Spearheaded the transition of ML infrastructure from AWS to GCP/GCS, optimizing scalability and performance. ● Created machine learning models focused on customer conversion, churn prediction, and behavioral segmentation using survival analysis, clustering, and tree-based techniques. ● Managed the day to day of a small team of junior data scientists to design, develop, and deploy recommendation systems that were integrated into Modern Warfare 2 (2022) and Modern Warfare 3 (2023). <i>Insight Data Science Fellow</i> ● Completed a data science bootcamp focused on transitioning academics into the tech industry, working on real-world data problems. ● Built a random forest model in Python to prioritize NYC restaurant inspections, improving violation detection by 2.5% and identifying critical issues up to 7 days earlier through an AWS-deployed API.	Boulder, Colorado March, 2026 – Present January, 2024 – 2026 January, 2021 – 2024 January, 2020 – 2021 New York, New York
Skills	Machine Learning: Linear Models, Decision Trees, SVM, Clustering, Deep Learning, Survival Analysis CI/CD: Jenkins, Airflow, Docker Software and Computing: Open Source Contributor, Python, DataBricks, MLflow, SQL, AWS/GCP, Spark, etc. Leadership: Experience organizing and leading workshops and collaboration meetings, Teaching and mentoring junior team members, Eagle Scout.	
Education	Texas A&M University, College Station, Texas ● Ph.D, Physics (astronomy focus), 2016	The University of Tennessee, Knoxville, Tennessee ● M.S., Physics (astronomy focus), 2009 ● B.S., Physics, 2007
